

Three **POWERetc** Power Quality / Energy Analyzer Packages

# Pick the Right One for Your Task

**POWERetc** is making it easier for you to select the power quality/energy analyzer that's right for you. We've assembled three packages, each complete with a cellular modem to access setup and data gathering. That means you'll only need to go to the jobsite twice – once to install and once to take down. That's a great economic benefit in any climate but even more valuable while we all strive to stay safe from COVID-19.

## Fluke 1750

**Easy to Use. No Thresholds to Program.** Once power is applied, the instrument automatically begins recording. The 1750's algorithm captures all events without the tedious setups. No one wants a wasted power study due to setup mistakes. **One Probe...Three Ranges.** Only available from **POWERetc** - switch-selectable ranges (100A, 1000A and 5000A) eliminating the need for multiple probes.

I PICK  
THIS ONE

## Dranetz HDPQ Explorer-Plus

**Top of the Dranetz Line. Flexible Setup. Color Display.** The Dranetz HDPQ® Xplorer Plus power quality analyzer is a hand-held portable instrument with a built in 7", tablet-like touch LCD display. Excellent report generation with Dran-View software. If you are already familiar with Dranetz analyzers, this is a good choice.

I PICK  
THIS ONE

## PQube 3 Rugged

**Zero Set-Up. Mobile Control.** Once installed the PQube 3 Rugged is accessed from PC, tablet or mobile phone. It measures and records all power parameters and formats the data in attractive, easy-to-understand graphs. Power disturbance event notifications can be sent immediately or on a schedule to limit the volume of emails. It is the most economical and efficient way to monitor power - no special software is needed.
